Retos en la inmunoterapia del hepatocarcinoma

Inmunoterapia y hepatocarcinoma

María Reig

Head of Liver Oncology Unit - BCLC group

Consultat of Liver Unit

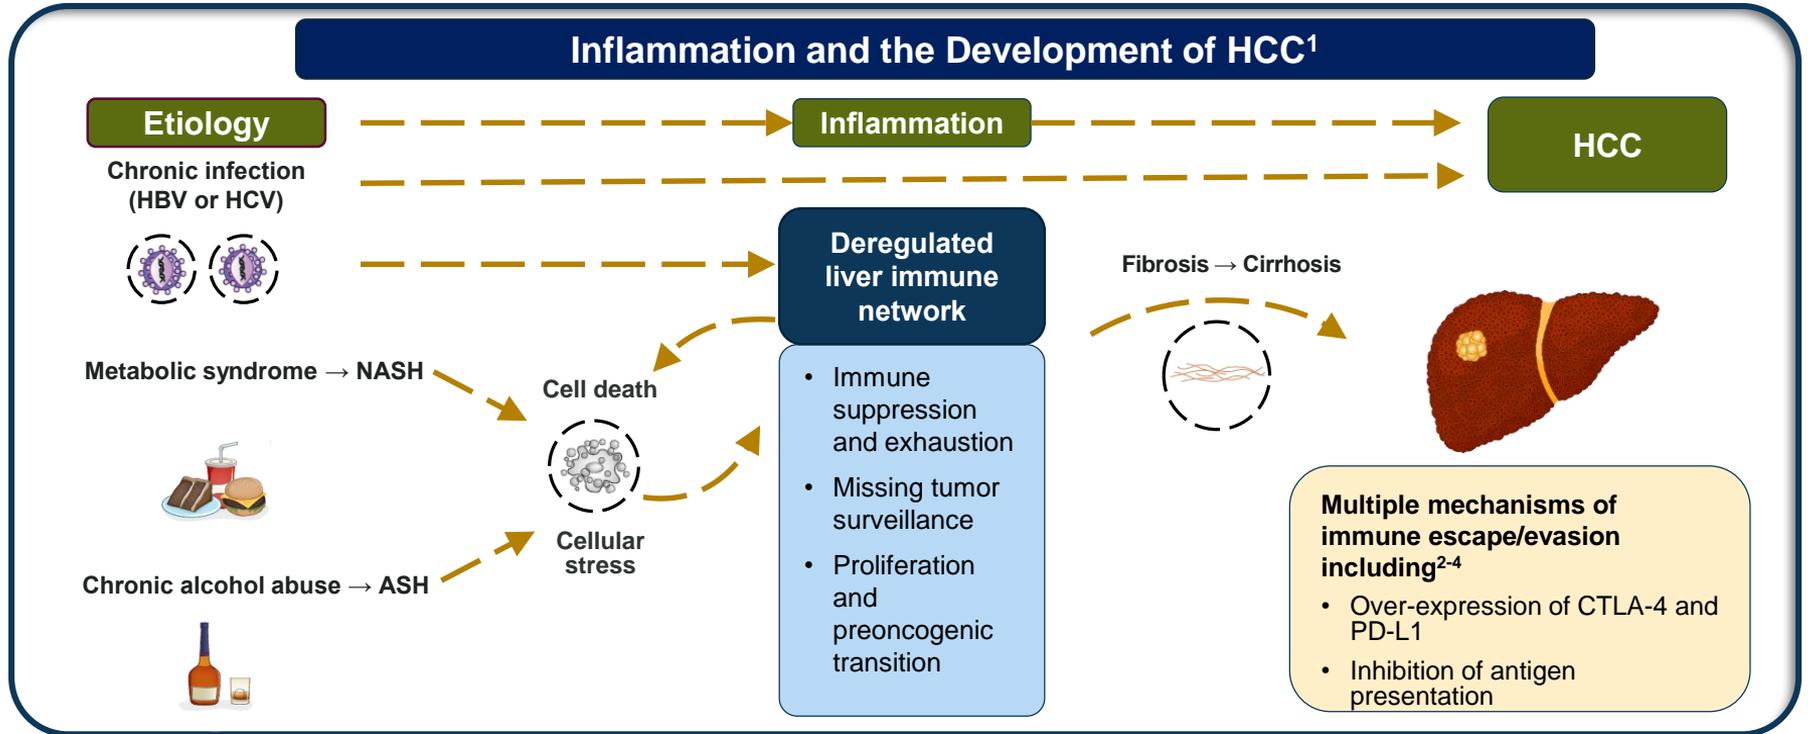

Hospital Clinic, IDIBAPs and CIBEREHD

I have an interest in relation to one or more organizations that could be perceived as a possible conflict of interest in the context of the subject of this presentation.

- **Employment:** Head of Liver Oncology Unit. Hospital Clinic Barcelona. Director of BCLC group at IDIBAPS/CIBEREHD.
- **Consultant or Advisory Role:** AstraZeneca, Bayer, BMS, Eli Lilly, Geneos, Ipsen, Merck, Roche, Universal DX, Engitix Therapeutics
- **Research Funding:** Yes (ISCIII, CIBER, AECC)
- **Speaking:** AstraZeneca, Bayer, BMS, Eli Lilly, Gilead, Roche, Guerbet, Biotoscana Farma S.A.
- **Travel support:** Astrazeneca, Roche, Bayer, BMS, Lilly, Ipsen
- **Principal or sub-Investigator of drug under development:** Abbvie, BMS, Adaptimmune, Nerviano, Bayer, Ipsen, Astrazeneca, Terumo, Incyte, Roche, Boston Scientific,
- **Grant Research Support (to the institution):** Bayer, Ipsen
- **Educational Support (to the institution):** Bayer, Astrazeneca, BMS, Eisai- Merck MSD, Roche, Ipsen, Lilly, Terumo, Next, Boston Scientific, Ciscar Medical, Eventy 03 LLC (Egypt)

Inflammation and Immune Dysregulation Lead to HCC

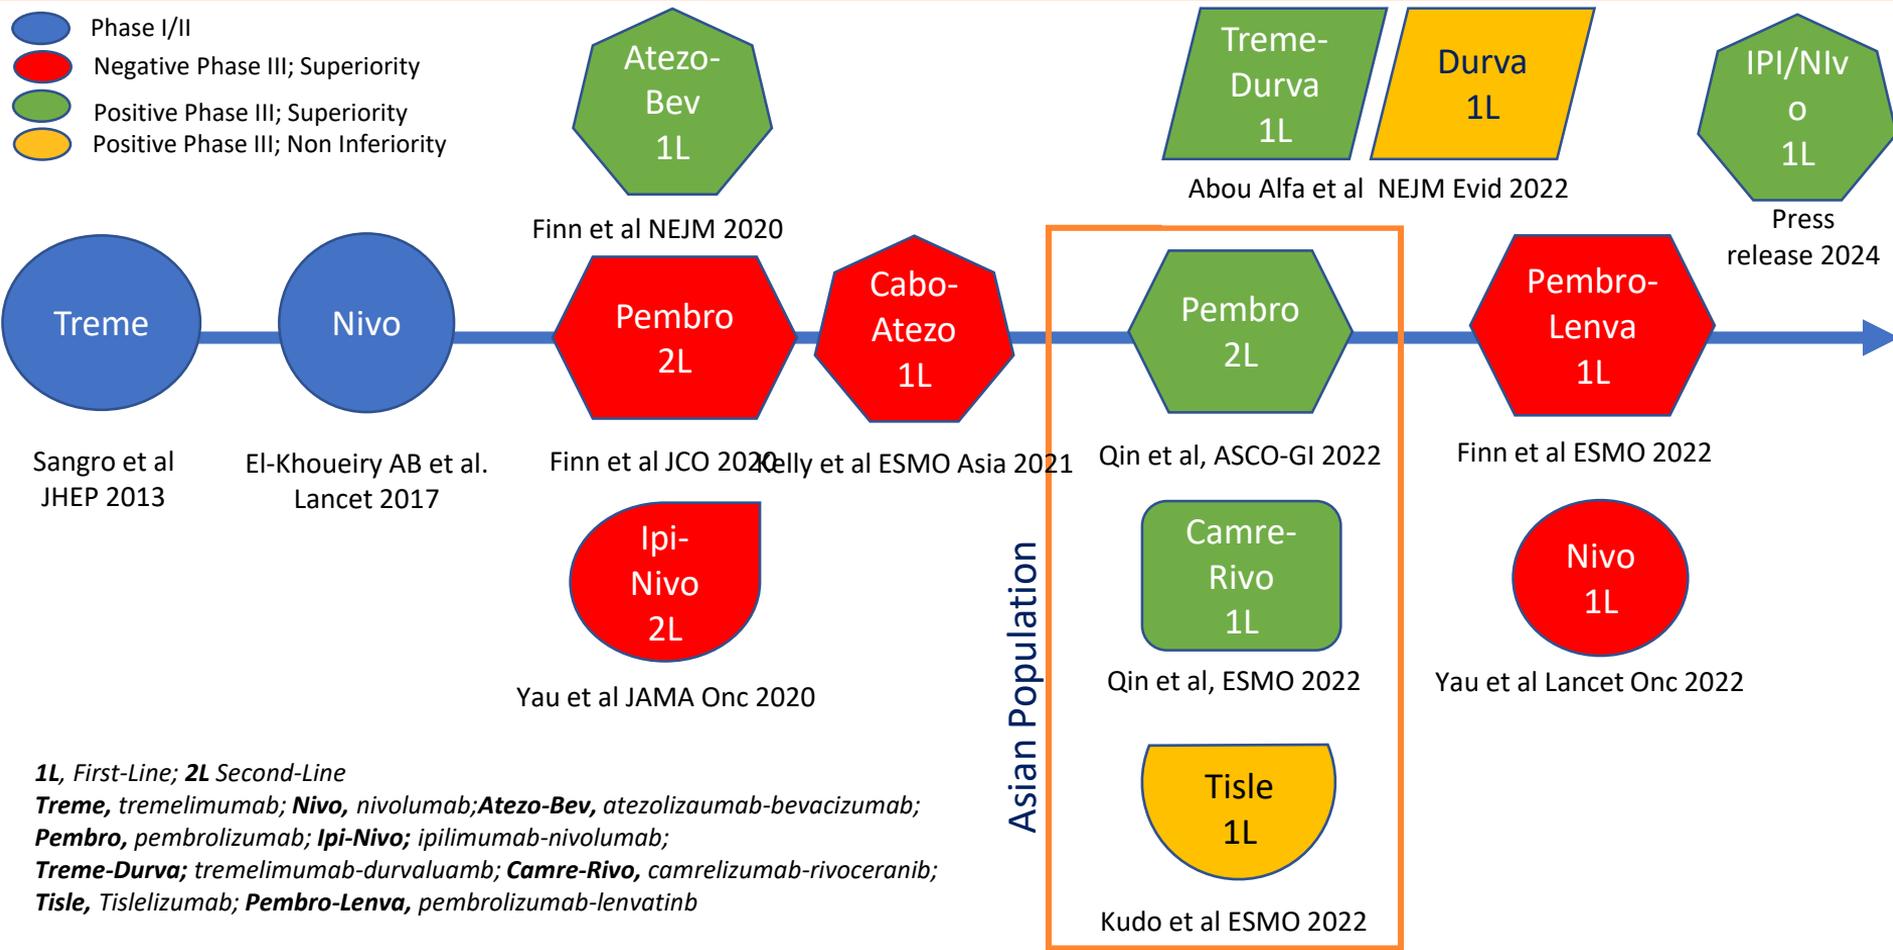

ASH = alcoholic steatohepatitis; CTLA-4 = cytotoxic T-lymphocyte-associated protein 4; HBV = hepatitis B virus; HCC = hepatocellular carcinoma; HCV = hepatitis C virus; NASH = nonalcoholic steatohepatitis; PD-L1 = programmed cell death ligand-1.

4. Zhang HH, et al. *J Viral Hepat.* 2010;17 Suppl 1:34-43. Diagram adapted from Ref 1.

- Phase I/II
- Negative Phase III; Superiority
- Positive Phase III; Superiority
- Positive Phase III; Non Inferiority

1L, First-Line; 2L Second-Line

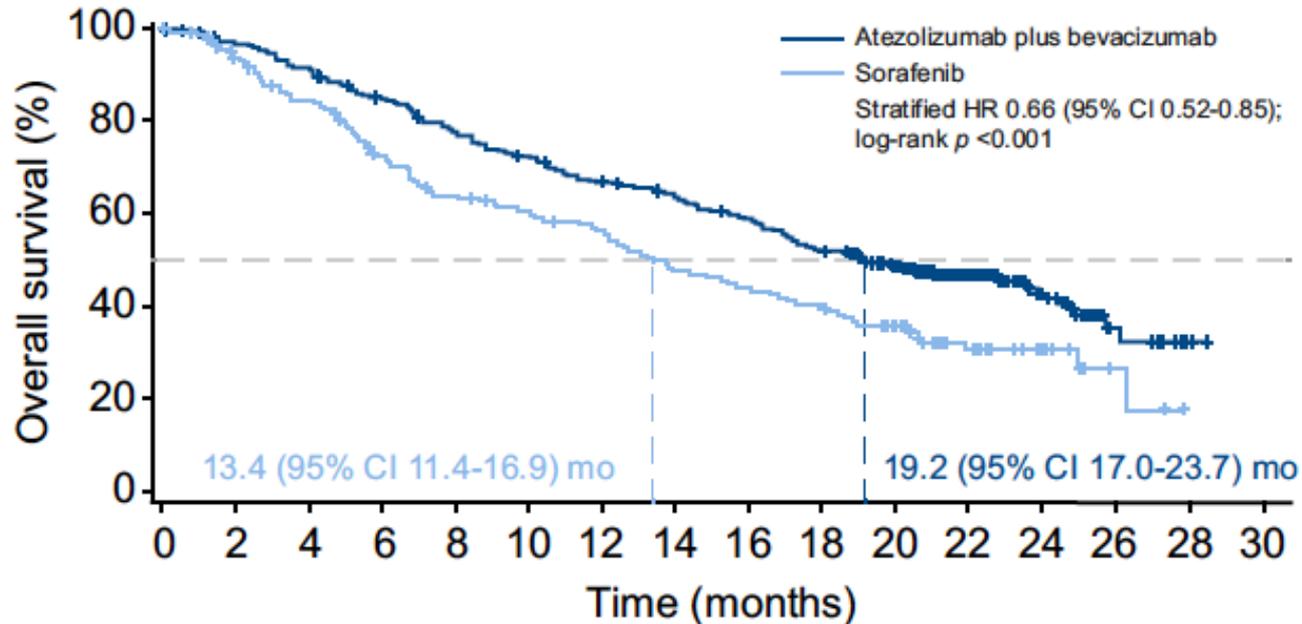

Treme, tremelimumab; **Nivo**, nivolumab; **Atezo-Bev**, atezolizumab-bevacizumab;
Pembro, pembrolizumab; **Ipi-Nivo**, ipilimumab-nivolumab;
Treme-Durva; tremelimumab-durvalumab; **Camre-Rivo**, camrelizumab-rivoceranib;
Tisle, Tislelizumab; **Pembro-Lenva**, pembrolizumab-lenvatinib

Asian Population

Unprecedented survivals with ICI

Atezolizumab + Bevacizumab

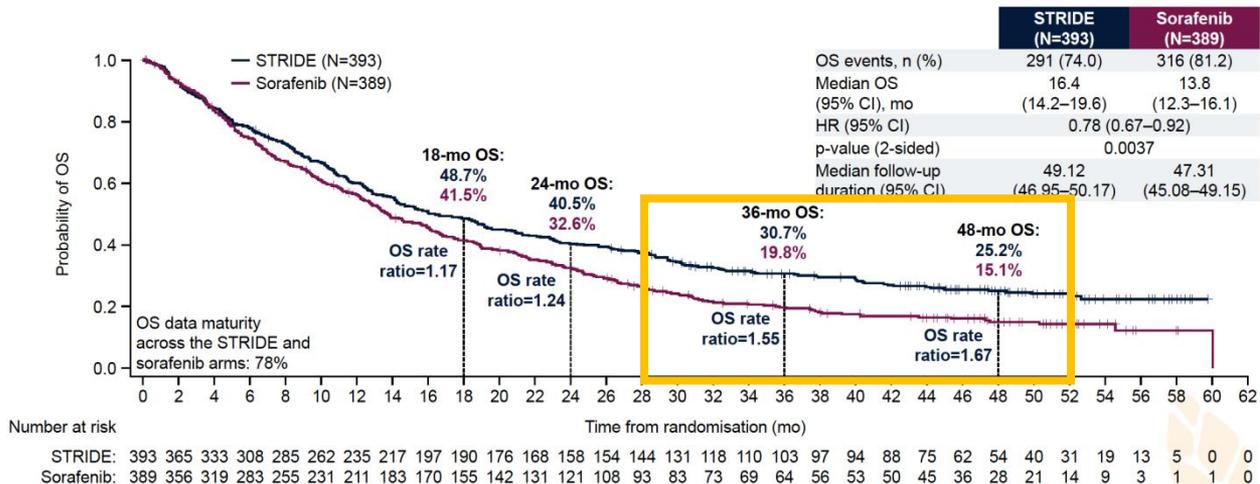

Overall survival

Tremelimumab + Durvalumab

Four-year updated overall survival for STRIDE versus sorafenib

STRIDE demonstrated an unprecedented one in four survival rate at 4 years

OS HRs and 95% CIs were calculated using a Cox proportional hazards model adjusting for treatment, aetiology, ECOG PS and MVI. The 36-mo OS rate had a nominal 2-sided p-value of 0.0006. Updated analysis data cut-off: 23 January 2023. CI, confidence interval; ECOG, Eastern Cooperative Oncology Group; HR, hazard ratio; mo, month; MVI, macrovascular invasion; OS, overall survival; PS, performance status.

Bristol Myers Squibb Announces CheckMate -9DW Trial Evaluating Opdivo (nivolumab) Plus Yervoy (ipilimumab) Meets Primary Endpoint of Overall Survival for the First-Line Treatment of Advanced Hepatocellular Carcinoma

03/20/2024

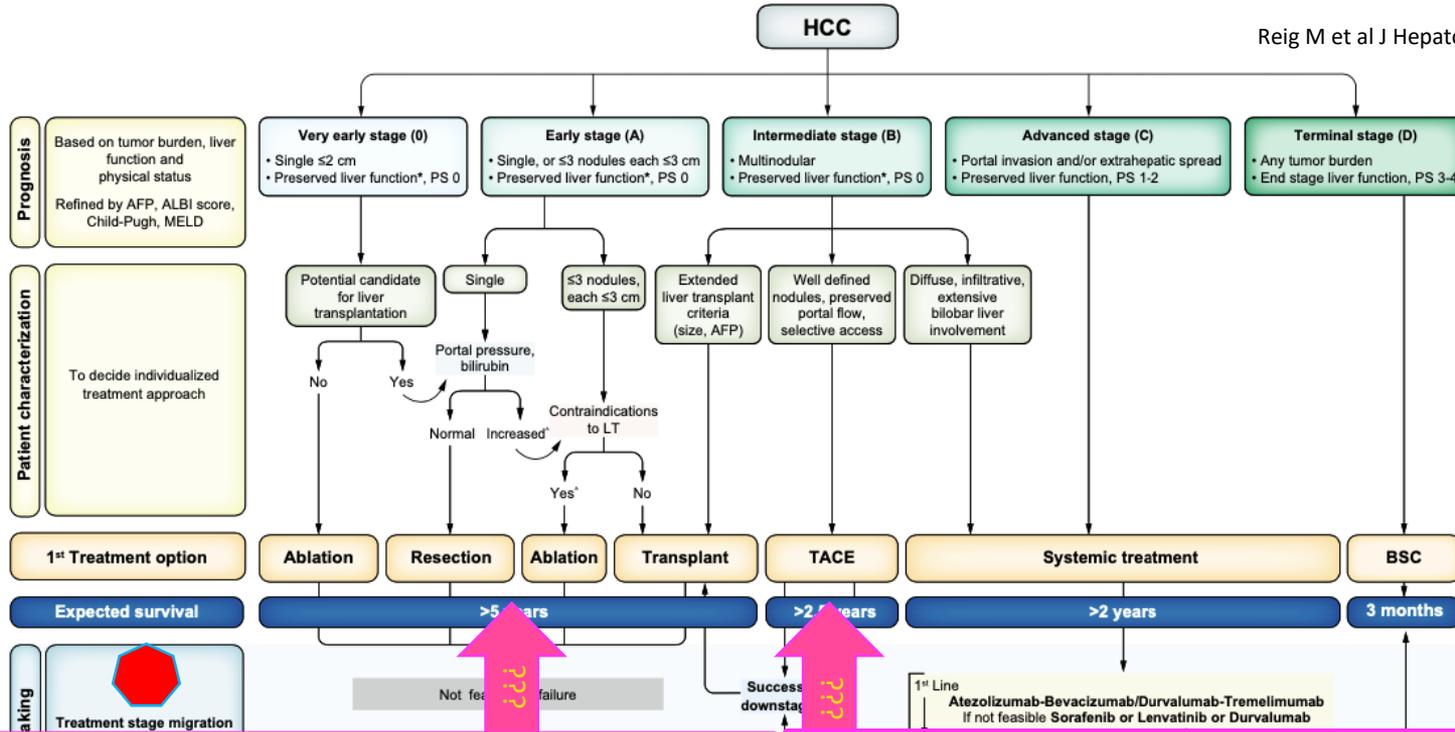

CATEGORY: [Corporate/Financial News](#)

Opdivo plus Yervoy demonstrates statistically significant and clinically meaningful improvement in overall survival compared to investigator's choice of sorafenib or lenvatinib

Reig et al Journal of Hepatology 2022

Reig M et al J Hepatol. 2022 Mar;76(3):681-693.

Atezolizumab plus bevacizumab versus active surveillance in patients with resected or ablated high-risk hepatocellular carcinoma (IMbrave050): a randomised, open-label, multicentre, phase 3 trial

Imfinzi plus bevacizumab met primary endpoint for progression-free survival in liver cancer eligible for embolisation in EMERALD-1 Phase III trial

Prognosis

Based on tumor burden, liver function and physical status
Refined by AFP, ALBI score, Child-Pugh, MELD

Patient characterization

To decide individualized treatment approach

1st Treatment option

Expected survival

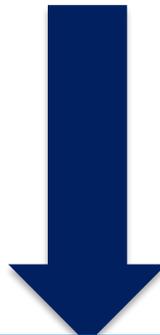

Clinical decision-making

Treatment stage migration
primes lower priority options due to non-liver related clinical profile

(Age, comorbidities, patient values and availability)

Evidence-based data

prioritize treatments demonstrating benefits in terms of overall survival (OS)

Recommendation for the 1st treatment option based on OS

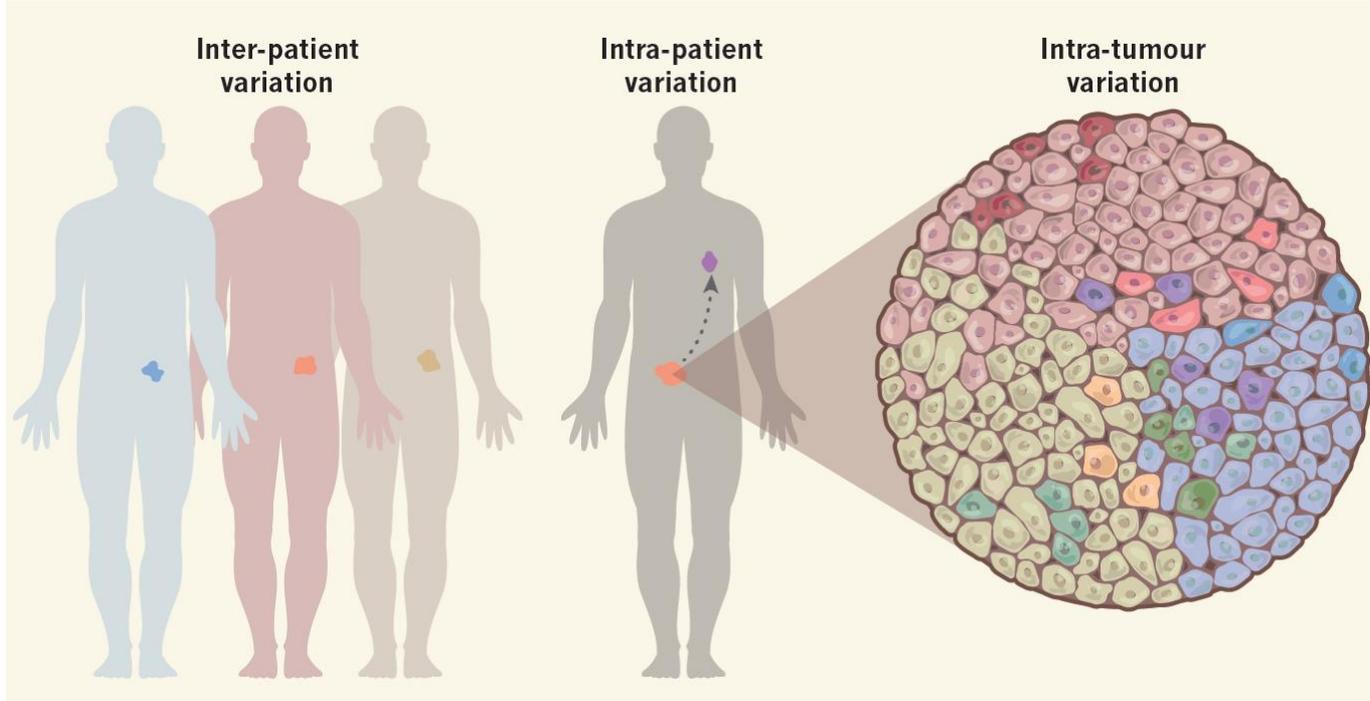

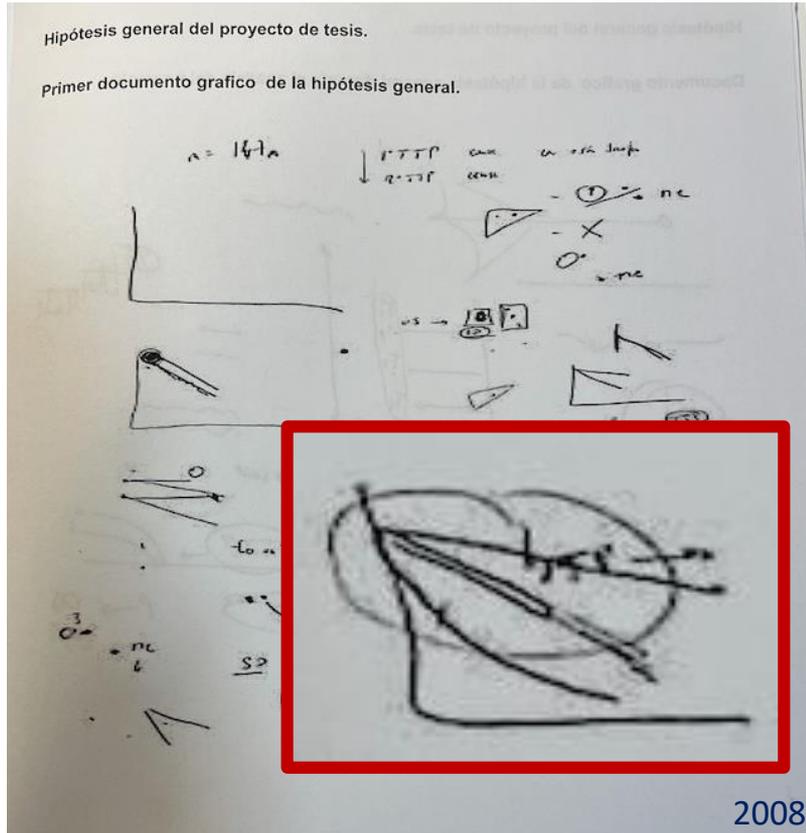

Clinical practice is heterogeneous globally.
The decision process depends on multiple factors and follows a 'Go-consider/No-consider' approach

UNMET Need:

*'Precision Medicine',
'Shared-Decision Making',
'Value-Based Healthcare'*

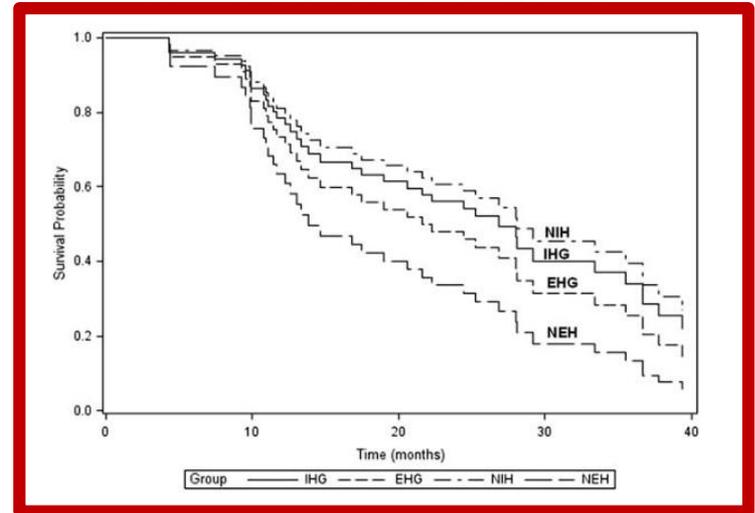

Molecular profile: One size does not fit all.

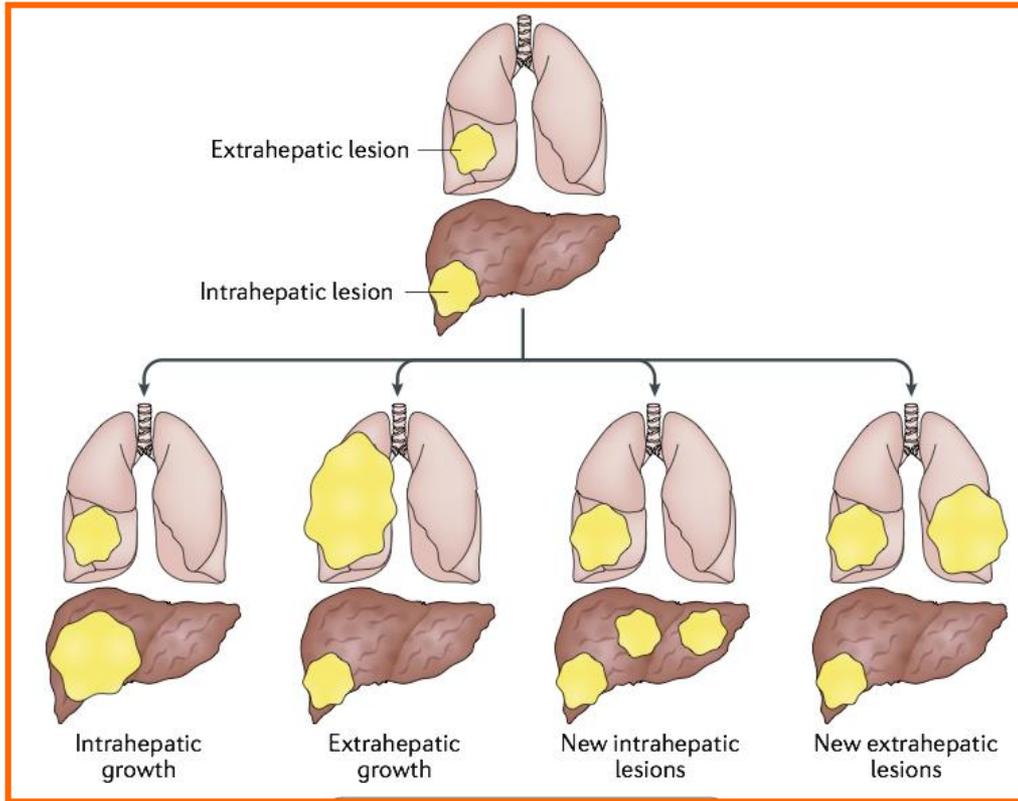

Postprogression Survival of Patients With Advanced Hepatocellular Carcinoma: Rationale for Second-Line Trial Design

Maria Reig,^{1,2} Jordi Rimola,^{2,3} Ferran Torres,⁴ Anna Darnell,³ Carlos Rodriguez-Lopez,^{1,2} Alejandro Forner,^{1,2} Neus Llarch,^{1,2} José Ríos,⁴ Carmen Ayuso,^{2,3} and Jordi Bruix^{1,2}

What does 'pattern of progression' mean?

Pattern of progression

Impact of Pattern of progression on Post-Progression Survival

CONVOCATORIA PROYECTOS DE INVESTIGACIÓN DE MEDICINA PERSONALIZADA. GRUPO COORDINADOR. MEMORIA DE SOLICITUD

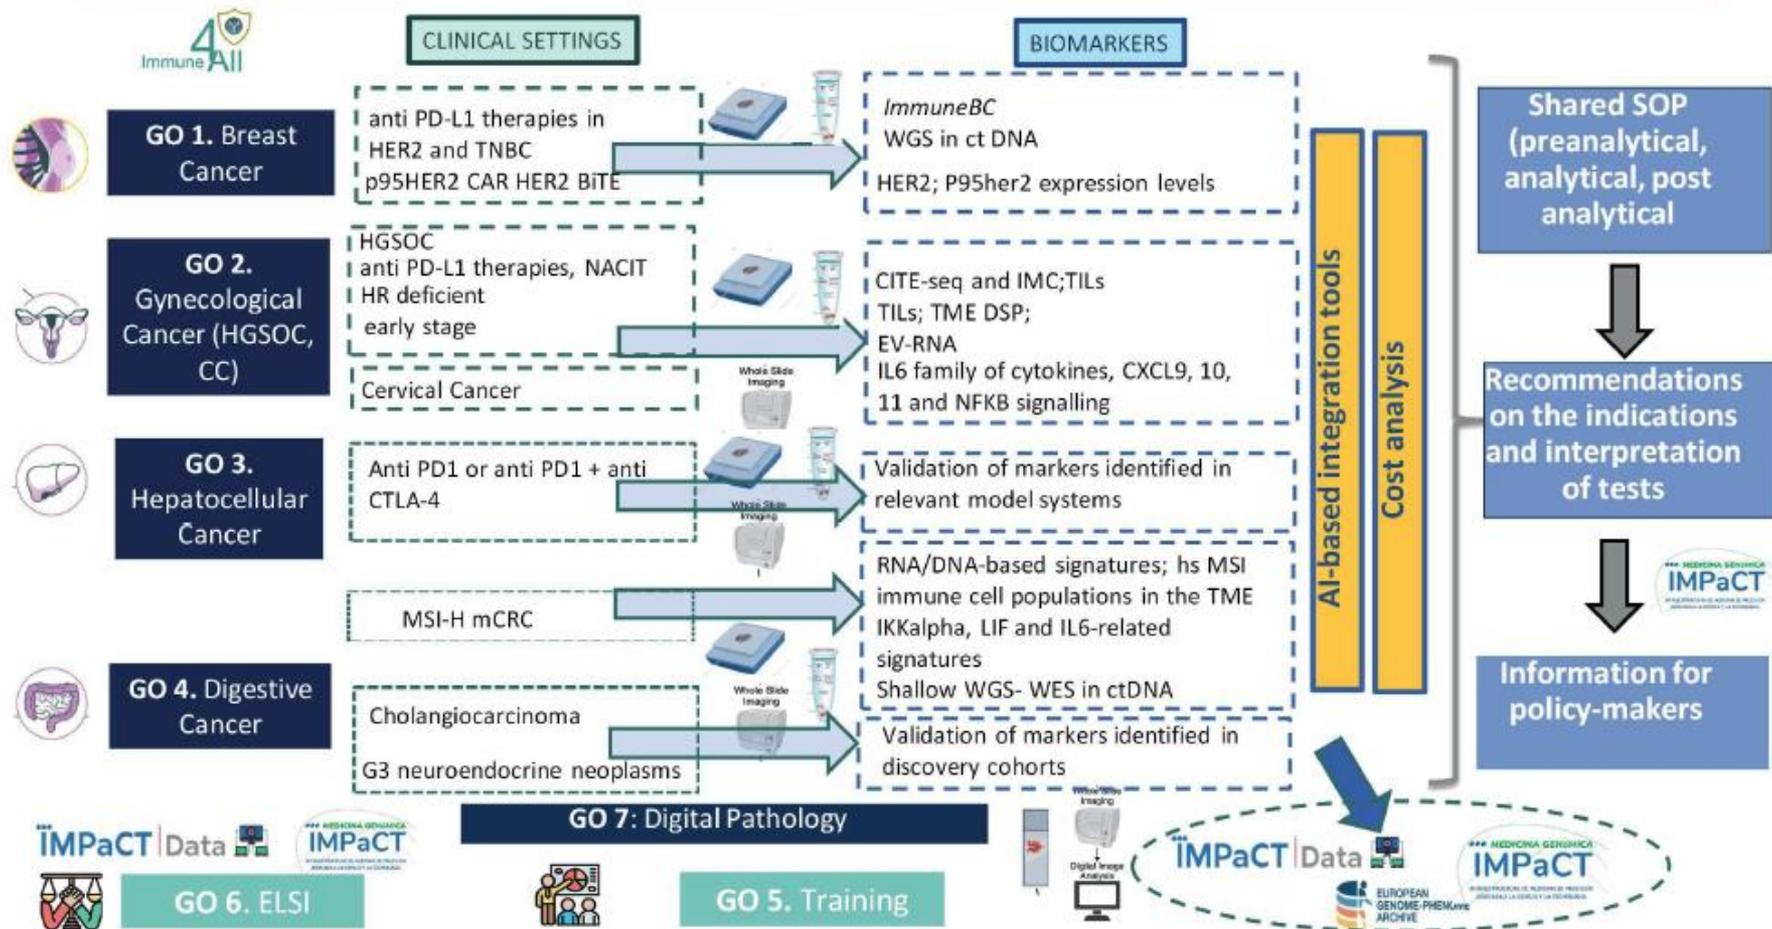

Expediente N°:
PMP22/00054

TITULO: Exploring the Feasibility of predictive and pharmacodynamics biomarkers of immunotherapy in solid tumors (Immune4ALL)

INVESTIGADOR PRINCIPAL: Enrique de Álava Casado

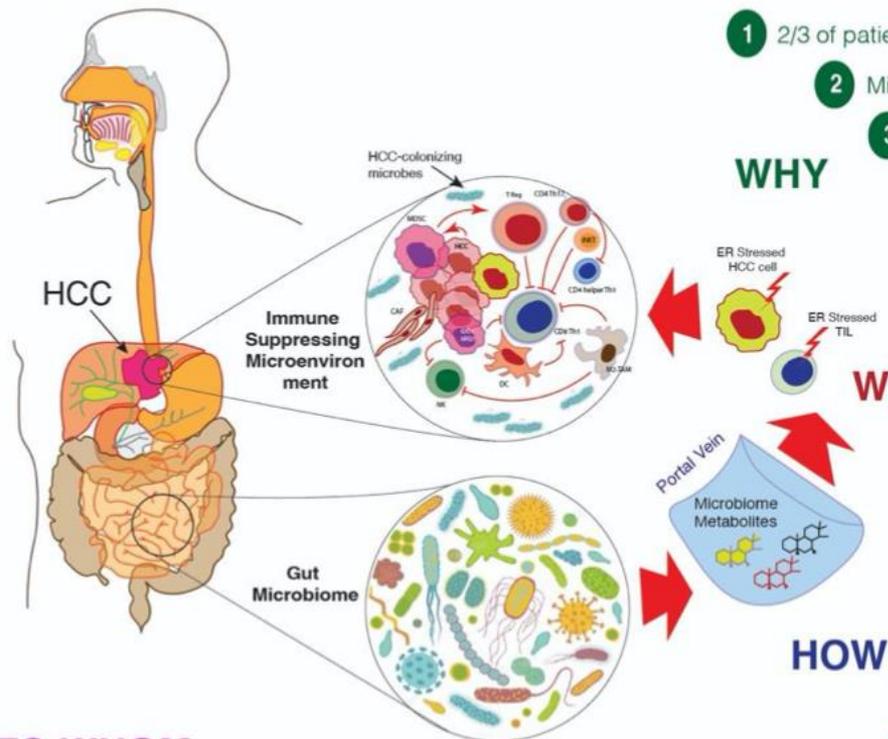

Modalidad: Multicéntrico con un centro solicitante

Figure 2. Exploring the Feasibility of predictive and pharmacodynamics biomarkers of immunotherapy in solid tumors

RETO

Rational to modulate the Microbiome-induced Endoplasmic Reticulum stress as tool to avoid the immune evasion in HCC

- WHY**
- 1 2/3 of patients with HCC do not respond to Immunotherapy (IT)
 - 2 Microbiome modification has been reported to modify IT sensitivity
 - 3 OUR preliminary data points to the enrichment of microbes HCC
 - 4 Microbiome-derived metabolites are Endoplasmic Reticulum stressors
 - 5 OUR preliminary data points to ER-stress response as an important cancer pathway related to immune surveillance

WHO

- 1 Multidisciplinary effort from 5 groups
- 2 260 HCC patients from 7 tertiary hospitals from 5 distant regions in Spain
- 3 Enhanced synergies between physicians, nurses, biologists, engineers, statisticians and the AECC

HOW

- 1 Identify the intratumoral bacteria involved in the response of HCC patients to immunotherapy
- 2 Generate a new panel of signatures to predict response/resistance to immunotherapy
- 3 Provide new mechanistic targets related to metabolite-derived ER Stress
- 4 Developing tools to predict HCC outcome
- 5 Establish the conditions for culturing and expanding IT-responders specific microbes

TO WHOM

- 1 This project will make something new to improve the life of patients with HCC
- 2 This project will connect experts in different disciplines (Academia, Non-profit and industry)
- 3 Promote direct interactions between patients with HCC, generating a science-driven patient network

- 6 Integrating clinical and molecular data through an innovative informatic platform

FIGURE 3. Rational, Team, Objectives and expected broad outcomes of RETO coordinated project
